#### Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

#### Example: [\(Simplified\)](#)

##### Flow

1. User registers/logs in to the Nutrition Assistant App and starts the app.
2. User selects or enters data (meals, profile, goals, etc.) and sends request to the backend.
3. Backend (Node.js & Express.js) processes the request and stores/retrieves data from MongoDB.
4. Processed data is returned from the backend to the frontend.
5. Data is visualized in the UI using React.js components and charts.

## User Stories

Use the below template to list all the user stories for the product.

| User Type           | Functional Requirement (Epic) | User Story Number | User Story / Task                                                                       | Acceptance criteria                                           | Priority | Release  |
|---------------------|-------------------------------|-------------------|-----------------------------------------------------------------------------------------|---------------------------------------------------------------|----------|----------|
| Customer (Web User) | Registration                  | USN-1             | As a user, I can register for the application by entering my name, email, and password. | User account is created successfully and the user can log in. | High     | Sprint-1 |
|                     | Registration                  | USN-2             | As a user, I can log in using my registered email and password.                         | User is redirected to the dashboard after successful login.   | Medium   | Sprint-1 |
|                     | Registration                  | USN-3             | As a user, I can securely log out of the application.                                   | User session ends and returns to the login page.              | High     | Sprint-1 |
|                     | Login                         | USN-4             | As a user, I want my session to be secured using JWT authentication.                    | Authenticated users can access protected pages only.          | High     | Sprint-2 |
|                     | Dashboard                     | USN-5             | As a user, I can view my dashboard after logging in.                                    | Dashboard displays user information and available features.   | High     | Sprint-2 |
|                     | Meal Plan                     | USN-6             | As a user, I can record and view my nutrition progress.                                 | Client details are saved successfully.                        | High     | Sprint-3 |
|                     | Progress Tracking             | USN-7             | As a dietitian, I can add a new client.                                                 | Updated client details are displayed correctly.               | Medium   | Sprint-2 |
| Dietitian           | Client Management             | USN-8             | As a dietitian, I can edit client information.                                          | Selected client is removed from the database                  | High     | Sprint-2 |
|                     | Client Management             | USN-9             | As a dietitian, I can delete client records.                                            | Meal plans are created and assigned successfully.             | High     | Sprint-2 |
|                     | Client Management             | USN-10            | As a dietitian, I can create personalized meal plans for clients.                       | Meal plans are created and assigned successfully.             | High     | Sprint-3 |
|                     | Meal Plan Management          | USN-11            | As a dietitian, I can update meal plans.                                                | Updated meal plans are saved and displayed correctly.         | High     | Sprint-3 |
|                     | Meal Plan Management          | USN-12            | As a dietitian, I can monitor client nutrition progress.                                | Client progress reports are displayed accurately.             | High     | Sprint-3 |
|                     | Progress Monitoring           | USN-13            | As a dietitian, I can monitor client nutrition progress.                                | Client progress reports are displayed accurately.             | High     | Sprint-4 |
| Administrator       |                               | USN-14            | As an administrator, I can manage application users and data.                           | User and application data can be managed securely.            | Medium   | Sprint-4 |
